Business Challenge

Pasadena Christian School identified the need to improve their manual verification process. In 2005, that process consisted of verifying separate financial items for each potential student's family's financial aid application. This could at times take weeks to complete, therefore delaying the enrollment decision.

Solution

Fortunately, Margaret Bucher, Financial Aid Manager for Pasadena Christian Schools, had received a flyer from CFA that outlined their tuition aid verification process. CFA verifies all eight financial areas of the application quickly and online, saving the school and the family's valuable time. They made the decision and switched from FFNA to CFA and have been satisfied with it for the last five years. "The transition was very easy, and well worth it," said Margaret.

Benefits

After Pasadena Christian School made the decision to transition to CFA from FFNA "it greatly improved the verification process for families, and meant less paper work for us," said Margaret. Some of the benefits include online program management, instant reporting (previously three weeks with FFNA), no charge for expedited processing and very detailed verification, with eight separate financial areas of focus.

"The transition was very easy, and well worth it," said Margaret Bucher.

CFA Tuition Aid Management

Is a confidential financial analysis of an individual family's ability to pay tuition. Schools are enabled to accurately & effectually award tuition aid.

- Ability to handle diverse application pool
- Recommendations based on cost of living by area
- Immediate results/reports
- Customer Support for Administrators and Parents
- Paper free approach is environmentally friendly
- Online application allows you to stop and finish later
- Customizable calculations
